

Custom Design

....with eco-friendly solutions

Green Initiatives:

Our Products: We suggest eco-friendly materials where it makes the most impact:

- **Banners and Large Format Signs** can be made from non-PVC material (polyester) or recycled material (100 % recycled plastic bottle fabric)
- **Outdoor signs** can be made with Aluminum instead of PVC.
- **Illuminated Signs** can be lit with LED's which use a fraction of the electricity that traditional lighting or Neon uses.

Waste reduction: We work hard to minimize scrap, recycle, reuse materials, make sure our signs are durable and will not need to be replaced. We can take a customer's previous sign and recycle it into a new sign.

Energy Conservation:

- Our administrative offices are separate from our production area, so we are able to regulate the heat & lighting and only use it when we need it.
- Our computers are shut down after hours, and
- Our Large Format Printer automatically goes into Sleep Mode when not in use.

Production:

- Our Large Format Printer uses an Eco-Solvent Ink that produces extremely low VOCs which provides a healthy environment for our staff.
- We use a Color Management Process which allows us to achieve the best color quality while maximizing our ink consumption.

Our Suppliers: We work with suppliers that have sustainability programs and that are dedicated to green initiatives, such as 3M and Oracal.
